Education

University of North Texas, Dallas, USA

May 2025

Master of Science in Information Science with a concentration in Information Systems

- Relevant Coursework: Information Organization, Data Analytics, Data Visualization, Computational Methods for Information Systems, Data Modeling for Information Professionals

Lendi Institute of Engineering and Technology, Visakhapatnam, India

May 2023

Bachelor of Technology in Computer Science and Engineering

- Relevant Coursework: Data Structures, Analysis of Algorithms, Database Management Systems, Object Oriented Modeling, Operating Systems, Computer Organization and Architecture, Software Engineering

Work Experience

ThinkCore Technologies, Bengaluru, India

March 2021 - March 2023

Software Engineer

- Worked as a Software Developer in the E-Commerce domain across various stages of the Software Life Cycle.
- Designed and developed high-performance Java-based Spring Boot RESTful APIs resulting in a 30% increase in user engagement.
- Led the complete migration of the ThinkCore Technologies web applications from React 17.0.2 to 18.2.0, implementing React Hooks to manage state in functional components.
- Implemented Redux for streamlined global state management, developing key components like Actions and Reducers.
- Optimized backend performance and scalability, leveraging AWS services such as Lambda, API Gateway, and DynamoDB to handle variable workloads and ensure high availability.
- Conducted cross-browser and platform testing based on user behavior in target regions, increasing product usage by 25%.

Technical Skills

Programming Languages: C, C++, Java, JavaScript, TypeScript, Python

Web Technologies: HTML, CSS, Sass, Bootstrap, JavaScript, jQuery, Express, Node.js, React, Redux

Databases and Cloud: MongoDB, MySQL, Dynamo, AWS, GCP

Frameworks: React, Redux, Node, Spring Boot, Bootstrap

Developer Tools: Git, VsCode, Eclipse, PyCharm, Atom Text Editor, Postman

Academic Projects

E-Commerce DevOps Implementation

- Implemented DevOps practices such as containerization, Container orchestration, Infrastructure as Code, and CI/CD for a demo E-commerce project.
- Experience implementing DevOps practices on multi-micro service architecture applications.
- Strong knowledge on Infrastructure as Code using Terraform. Implemented an EKS cluster creation within VPC using Terraform modules.
- Implemented CI/CD for a Java-based microservice using GitHub Actions and Argo CD to achieve a single touch end-to-end automation.
- Good Understanding of AWS cloud and experience using AWS networking concepts like VPC and Load balancers.
- Exposing the front end securely to the external users by mapping the Route 53 DNS nameservers with the Domain provider.

Contact Keeper

- Developed a web application for contact management with a user-friendly interface using React.js.
- Built and integrated RESTful APIs using Express.js and Node.js for seamless backend operations. Implemented MongoDB for efficient data storage and retrieval. Secured user authentication and authorization using JWT.
- Enabled users to perform login, logout, and full CRUD (Create, Read, Update, Delete) operations on stored contacts.
- Tested and validated API endpoints using Postman, ensuring reliability and functionality.
